USB Digital Microscope for Computers (400x, 8 Super-Bright LEDs)

Product code: CVJM-K149

:
This 400x microscope lets you experience the thrill and discovery of a whole new microscopic world- totally hidden from the naked eye.

This USB digital microscope can magnify objects up to 400 times their original size and uses a dynamic image sensor and eight super bright white LED lights for creating detailed images like you've never seen before. This allows you to see even the smallest of details, in high resolution, directly on your computer screen. Details like skin pores, individual strands of cotton, the milky or amber clouds inside THC crystals or even the fine scratches on a collectible coin that would be impossible to

detect with the naked eye, can easily be viewed by this amazing USB digital microscope.

With the included software you can even save your images directly to your hard drive in 2592x1944 .JPG files, or 640x480 30FPS video files for sharing with your friends, family, boss or client. There is even a handy zoom and photo capture button on the side for your convenience. If you're a professional user then you'll be happy to know that this software will even display a measurement scale to determine the exact size of the objects you are viewing for accurate appraisals or damage assessment.

At a Glance...

- USB Cable Length: 150cm
- Dimensions: 110mm x 30mm (Length x Radius)
- Compatible Systems: Windows 2000, XP, Vista, 7 (32 bit version only)
- Manufacturers Ref: FUKUCJ77QSQWD

Product Notes

- This digital microscope is very easy to use. Even children can have fun using it! Simply install the included software CD on your computer then plug the microscope into any USB port. Place the microscope in its holding stand and place an object of your desire underneath it. The closer you place it the closer your image will appear. Open the software program to view a real-time image of your object and use the rotating dial on the microscope to adjust the focus of your image.
- While capture software is provided, it only includes basic functions and may not work on all operating systems. More advanced software is available on the internet, such as; AMC CAMP + Brightwall, MicroCapture, USBscope, and LX-ProScope
- Also makes a great investigative tool for Materials Inspection, Jewels, Textile, and Science Classrooms
